<b>14. Description of lectures</b>					
<p>Linear normed spaces, operators and functionals on linear spaces. Operations among operators. Metric spaces. The Baire-theorem. Semi-norm. Compactness. Continuity of linear operators. Contraction operators. Complementary concepts. The geometry of Hilbert-spaces. Complete ortonormal systems. The Gram-Schmidt ortogonalization. The projection theorem. The ortogonal complementer. Direct-sum of Hilbert spaces. The representation theorem of Frigyes Riesz. The dual space of a linear space. Unitary and izometric operators. Fourier transform, Fourier operator. The Hahn-Banach theorem. Application of functional analysis in the numerical methods. The Ritz-process.</p>					
<b>15. Description of practices</b>					
<b>16. Description of labortory practices</b>					
<b>17. Learning outcomes</b>					
<p>A. Knowledge B. Skills</p> <ul style="list-style-type: none"> <li>Students must know comprehensively, interpret in a constructive way and apply in his research activities in an innovative way the following elements of analysis methods: theory of linear functionals and operators; application of the functional analysis in numerical methods.</li> </ul> <p>C. Attitudes D. Autonomy and Responsibility</p> <ul style="list-style-type: none"> <li>Students must pursue to get knowledge of the new scientific results, the latter are applied with responsibility and initiates new resource activities in new fields of knowledge in an innovative way.</li> </ul>					
<b>18. Requirements, way to determine a grade (obtain a signature)</b>					
Regular participation at the lectures and written exam.					
<b>19. Opportunity for repeat/retake and delayed completion</b>					
According to the TVSZ.
