14. Description of lectures

Ship design methods. Design spiral. Conceptual design. Economical aspects of ship design. Determination of main dimensions. Weight estimation. Dedsign of Lines. Freeboard and subdivision. Design of propulsion systems, selection of machinery. Tender documentation.

15. Description of practices

Worked examples for supporting the theory.

16. Description of labortory practices

17. Learning outcomes

A. Knowledge

- know and understand the theory and practice of merchant ship design
- know the input parameters and boundary conditions, and the calculations and procedures for the preliminary design

B. Skills

- based on the knowledge above the student is able to determine the main dimensions of a vessel for a given generally described scope of work
- able to prepare a general arangement drawing, preliminary technical description, lines plan and other drawings repateed to preliminary design
- able to use the Internet and CAD software for his/her work

C. Attitudes

- interested, responsive, take care for the deadlines
- D. Autonomy and Responsibility
 - the student makes responsible decisions
 - asks for the professional opinions of others and takes care of the challenges responsibly

18. Requirements, way to determine a grade (obtain a signature)

Requirements for signature: 1 semestrial home work 1 exam measuring the theoretical knowledge,

the final result is the average of the parts

19. Opportunity for repeat/retake and delayed completion

Second exam and delayed submission of the homework

20. Learning materials

Péter Pál Lehel: Hajótervezés (in Hungarian) Watson: Practical Ship Design (Elsevier, 1998) Papanikolaou: Ship Design-Methodologies of Preliminary Design (Springer, 2014) case studies

Effective date 10 October 2019 This Subject Datasheet is valid for Inactive courses
